

Print and apply your labels faster at lower cost

Codeway Batch Apply heads for Avery 64 label printers

Codeway CW-D1 Batch Apply heads turn Avery 64 dispensing printers into automatic print apply machines for labelling batches of products coming along conveyors.

Avery 64 printers are ideal thanks to their high print speed (up to 12 inches per second), excellent label dispensing and rewind mechanisms, and ribbon saving for pre-printed labels.

The conveyor runs at print speed so the head can roll the label down on to the product. The dispense edge and roller swivel allowing about 50mm for uneven pack size and position.

CW-D1 heads attach to Avery 64-04 and 64-05 dispensing printers. The extended dispense edge adjusts to label length.

A package detector and an Avery USI interface triggers printing and control the label position.

Labelling software allows for standalone or networked operation with local or central control.

The CW-D1 Auto-Apply head as shown is for labeling sandwiches.

Specifications

Print apply cycle: batch
Application method: roll-down
Label positions: top, bottom, side
Product handling: conveyor
Conveyor speed: 18m/min max
Cycles/min: product/label dependent
Max label: 110mm x max length
Min label: 25.4mm x min length
Handling: left
Printer interface: USI

Requirements

Dispensing 64-xx printer
Avery USI
Machine stand
Package detector

Applications

Boxes cartons, packs
on packing lines.
